

Factsheet: Uterine Fibroid Embolization (UFE)

Dr Eisen Liang, Interventional Radiologist (02) 9473 8728 info@sir.net.au

- ❖ Non-surgical local anaesthetic procedure since 1995
- ❖ Safe and minimally invasive, 90% patient satisfaction
- ❖ As effective as hysterectomy (Cochrane Review)
- ❖ Shrink multiple fibroids large or small
- ❖ Alleviate menorrhagia, dysmenorhea and bladder symptoms
- ❖ 1-2 nights in hospital, 1week downtime.
- ❖ Ideal for busy mothers and working women.
- ❖ Suitable for unfavorable surgical candidates:
Previous surgery/adhesion, obesity, diabetes, bleeding disorders

Case Study: 44 year old lady with severe heavy menstrual period requiring super pad change every 2 hours. She tried medications such as Cyklokapron but it was not helping. She choose to have UFE to keep her uterus. At 6 months post UFE: her fibroid shrank from 138ml to 51ml; her heavy period resolved and she felt "Estatic".
